GMDAS SatComs Solutions

Stay Connected Anywhere

ISatHub

The ISatHub is a similar service as the GO but service is through the Inmarsat network. Hardware is slightly more expensive but with higher speeds. \$1750 + GST

Terra 800

Terra 800 is a fixed Inmarsat terminal capable of connecting to a telephone handset or PABX.

Hardware pricing in US\$ from US\$1700 + GST. Airtime packages are available in pre-paid or postpaid (inclusive calls) plans. Ideal for head office use for calling to and from fleet vessels at cheap rates.

The network is anticipated to be live Q1 2016.

VSAT Antenna Systems

VSAT Antenna systems are available for an “always on” solution for multiple users and calls.

They are available in fixed, flyaway or auto-deploy configurations. Higher speed data and local calling capabilities are a feature.

GX Antenna Range

Available for the Inmarsat Global Express Network, operating on the Ka frequency band capable of data throughput up to 50Mbps. These antennas are available in fixed, flyaway, flyaway auto-point and auto-deploy.

BGAN Systems

The BGAN offers voice, data, Bluetooth & Ethernet connectivity for multiple users up to 1200kbps. Available in lightweight portable options or vehicle mounted configurations. Hardware costs start from US\$2500.

Explorer 325 Terminal

EXPLORER 325 is a compact BGAN system for on-the-move communication. The system consists of three fully integrated units: a transceiver, an IP handset and a roof mountable antenna with magnetic mounts.

Explorer 510 Terminal

Ultra-portable and easy to use, this lightweight BGAN terminal is a powerful next generation tool for field communication worldwide.

Explorer 710 Terminal

Internet browsing, email, live video broadcasting, phone services, large file transfers, video conferencing, live video streaming and VPN and the new BGAN HDR service are all possible with the 710 on the BGAN satellite network. Dual units provide speeds of up to 1.2MB with bonding feature.

Broad-IP "FlyAway" System

Our lightweight "FlyAway" deployable VSAT system provides up to 8Mbps internet, anywhere in the world.

By using our custom designed pointing application, the Broad-IP "FlyAway" can be easily set up by the user without the need for a VSAT engineer to achieve optimum signal quality in a matter of minutes.

Our Broad-IP packages allow unlimited internet for a fixed monthly fee, making this a cost effective solution for high data users.

No Engineer Required

Our smartphone app permits "line-up" of the flyaway VSAT with the satellite without the need for expensive, bulky and complex spectrum analysers. It requires minimum training to quickly deploy and operate the system in a matter of 15-20 minutes.

Compact to transport

At under 20kg per box the system can be taken as checked luggage on most commercial flights, meaning it's ready to be deployed as soon as you arrive.
